#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 2. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by DE 100 39 169
- A1. The reference discloses surface hardening fuel pump components to increase their wear resistance. See Figure 5.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/084,067

Page 3

Art Unit: 3747

4. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over The encyclopedia of Materials Science and Engineering, pp 3210-3213 or pp520-522. The section describing nitriding clearly states that "the main effects of nitriding are to give the steel improved wear resistance with less tendency to seize and gall, hard surfaces with a tough core..."

Fuel pumps are well known in the art. It would have been obvious to one of ordinary skill in the art to harden the sliding and rotating surfaces of a fuel pump components by nitriding, carburization-quenching or carbonnitriding because such processes are well known in the art and known to increase the wear resistance of such surfaces.

### Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the cited references discussing surface-hardening steel components to increase wear resistance using one of nitriding, carburization, and carbonnitriding.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas Moulis whose telephone number is (703) 308-2618.
